

MARSHALL COIL

MARSHALL COIL... Leggett & Platt has perfected the popular Marshall spring coil unit to new heights of quality and durability. The Leggett & Platt Marshall coil unit is now even more tailored and manufacturer friendly.

- Patented sinusoidal glue pattern.
- Each coil is manufactured from high tensile wire and stress relieved for lasting resiliency.
- Six wire convolutions in each coil provide set resistance and product longevity.
- Each coil has a pre-load when encased in the fabric for enhanced resiliency, support, and eliminates permanent coil set.
- Each coil is encased in high quality, high density specially designed fabric. This fabric is designed to minimize friction and noise while maximizing wear strength.
- Coils are encased by ultrasonically welding the fabric. This creates a high strength bond between each coil and along the top of the encasement.
- Foam encased option available.
- Also available with optional posturized zoning.
- Each row of individually encased coils is precisely positioned by a robotic arm, then bonded to the outer fabric. This creates a consistent distribution of support throughout the unit.

- We supply and control the high quality of our wire product from our own wire mills.
- Coast to coast distribution.
- Representatives servicing your area.

LP 9000 Certified

The **Active Support Technology™** of **innersprings** allow your muscles to relax in a more natural sleep position. The **coils adjust instantly** to your sleep movements, **comforting and supporting** your body actively as you dream on.
